

Zebra: Who Is Third?

An illustrated guide to the worksheets

Find a beginning. Touch each friend. Find a place.

wondermaths.app

Find START

Look for the flag. That is where the counting begins. Start at the friend closest to the flag.

The flag can be on the left or the right side of the row.

The START flag
closest to the first friend

Touch one friend at a time

Touch each friend once, moving along the row. Do not skip and do not touch twice.

One gentle touch for each friend keeps the counting honest.

Find the same friend below

Point to the same friend in the row below. Say the friend's name, then choose that picture.

The three pictures below the row are the choices.

WHO IS FIRST?

START can be on the right

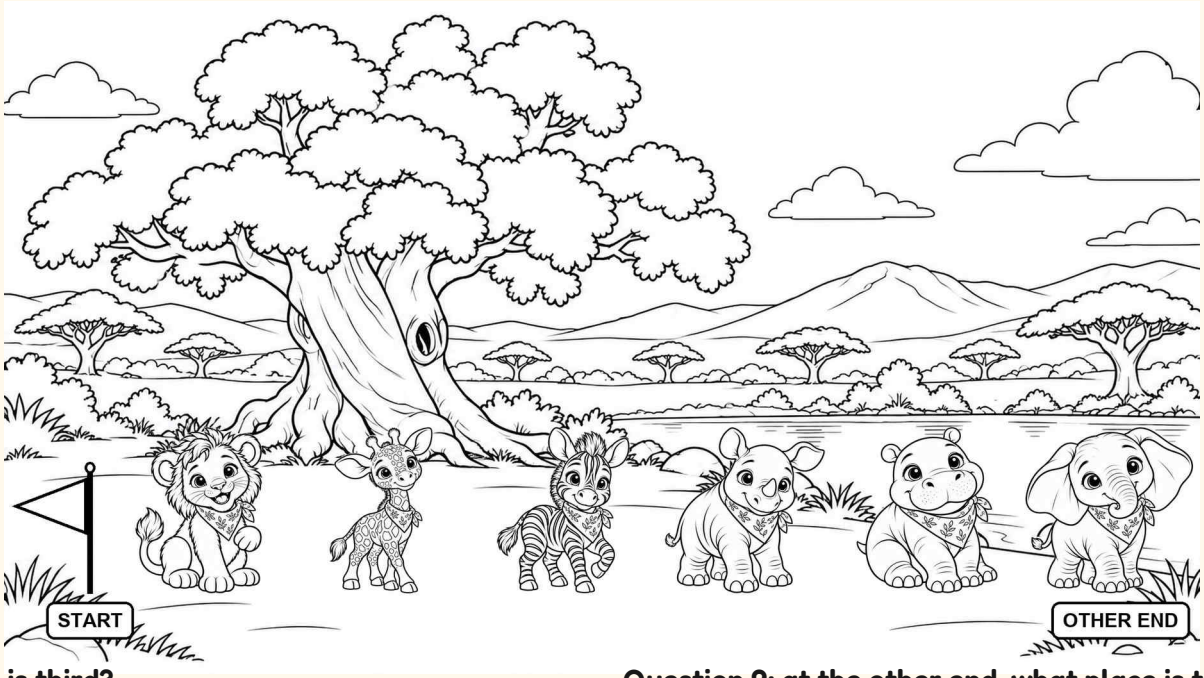
Count from the flag, even when it is on the right. Start beside the flag and move one friend at a time.

Same four friends - a different beginning.

Two questions, two beginnings

Read the first question, then the second. Both use the same line of friends, kept unchanged.

One question begins at START. The other begins at the other end.



Question 1: from START, who is third?

1. FROM START, WHO IS THIRD? CIRCLE ONE FRIEND.

Question 2: at the other end, what place is the Zebra?

2. START AT THE OTHER END. WHAT PLACE IS THE ZEBRA? CIRCLE ONE NUMBER.

3 4 6

Check by counting again

Touch each friend again, slowly, to check your answer. Say each name as you go.

A small paper counter can mark the friend you counted.

A paper counter can mark the friend you counted.

Try it with a toy line

Line up toys. Mark one end with paper. Count from the marker and say who is first and last.

Try a line of three toys at home.
