Gecko: Delivery Mix-Up

wondermaths.app

COUNT · COMPARE · REPAIR Three pieces arrived, but the order asks for two. Help Gecko make the basket match.

1 BY THE RIVER
Beside the river, warm and wide,
a little fruit cart waits outside.
Gecko rolls it into view.
Aro checks what friends need, too.

2 THREE CAME, TWO NEEDED
Three bright fruits came in the load;
two were ordered down the road.
Three came in, but two must stay.
One extra fruit can go away.

3 COUNT AND COMPARE
Touch and count them, one by one.
Count each fruit until you're done.
Three is more than two, we see.
Two is what the count should be.

4 ONE GOES BACK
Tap one fruit. Back to the crate!
Two stay in the cart and wait.
One went back. Now count with me:
Two are left, not one or three.

5 JUST ENOUGH
Two in the basket, snug and bright,
match the tag. The count is right.
Tap the green check; off they go.
Thanks from friends we love and know.

Point to two, then tap with care.
Just enough is what we share.

ORI'S COUNT THOUGHT

If the basket has more than the order, take some back. Count again until they match.

Ori says

Read the order.
Move a fruit.
Check.
