

A quick guide for parents and caregivers

Capybara: Two Windows

Ages 3-5

The goal: Match the same small number of flowers in a new arrangement.

Playful practice, not a test.

5 ways to help without giving the answer

1. **Look at the group.**
   Let your child look before naming numbers.
2. **Show the action.**
   Watch the hand demo: choose, move, then check.
3. **Leave the choice.**
   Drag or tap a picture; use the green check.
4. **Offer a quiet hint.**
   Ask: Does every flower have a partner?
5. **Welcome another try.**
   Let your child change a picture and check again.

Your tiny play plan

5

minutes

is plenty

- No timer
- Try again
- Stars for matches

Let your child choose. You can wait and wonder.

5 signs the math is happening

1. **Looks across both groups**
   They compare the model with each picture.
2. **Notices a small group**
   They may see a pair or count to check.
3. **Looks past the shape**
   A row and a diagonal can hold the same number.
4. **Checks the spacing**
   Spread-out flowers need not mean more.
5. **Revises a choice**
   They compare again after a mismatch.

Try it away from the screen today

Make a small group.
Use 1-4 large paper flowers.

→

Make two choices.
One matches; one has a different number.

→

Rearrange and compare.
Ask your child to point to the match.
