

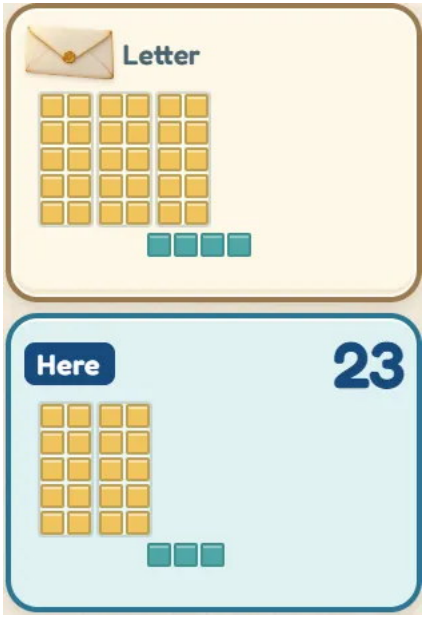
Zebra: Tilt the Mail Cart

Help Zebra deliver one letter.

Match the address on the one letter with Here, then press the green OK.

Here

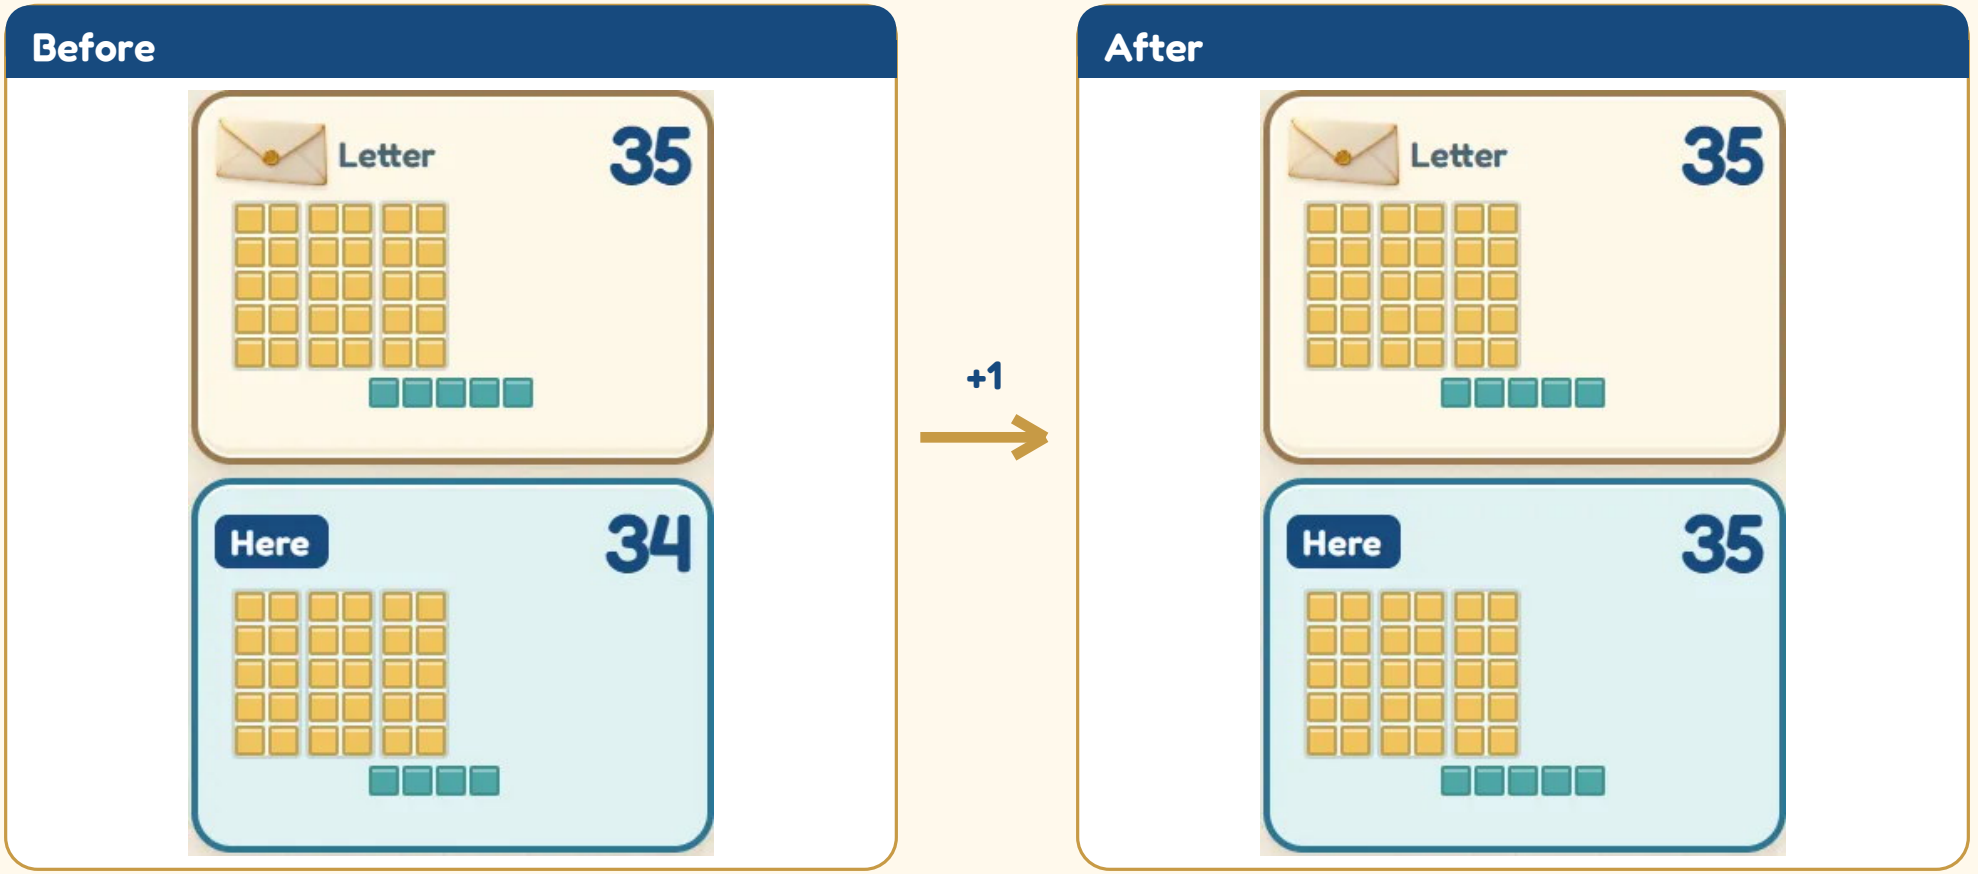
Your letter



Two addresses to compare

Look at the letter. Look at where you are.

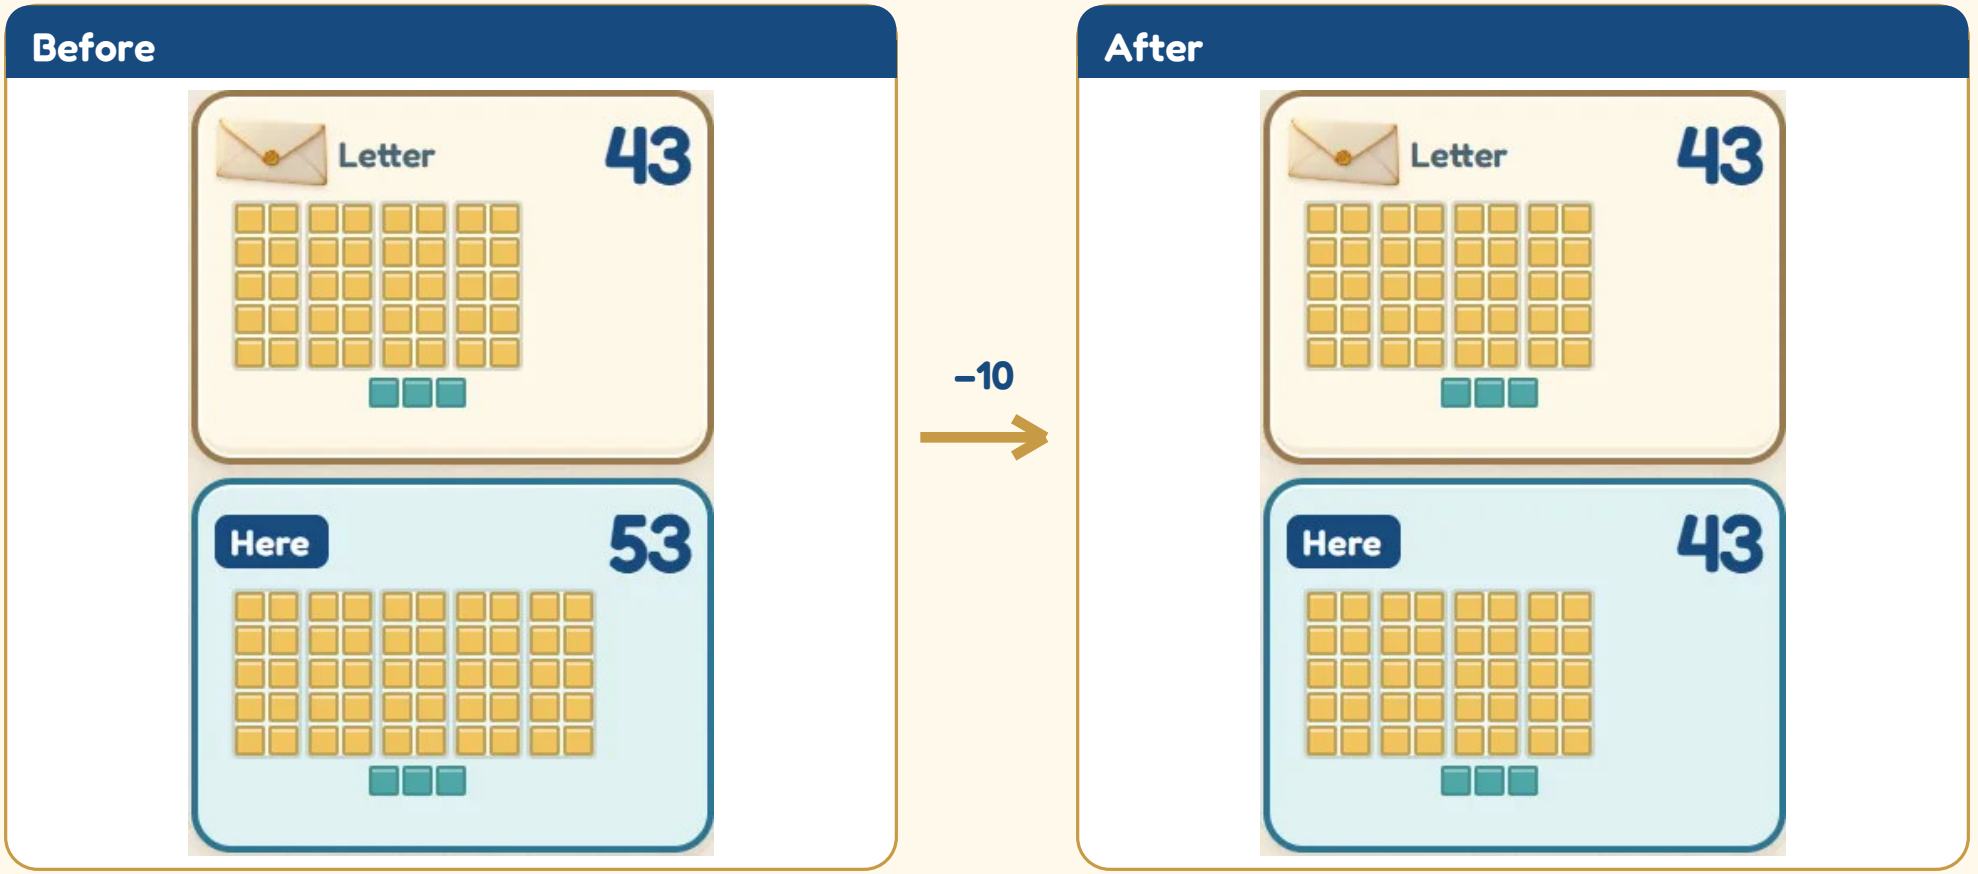
The letter model and Here use full tens and ones. These are addresses, not counts of letters.



One step changes one

One step right adds one small square.

The three tens stay in place, so 34 becomes 35. The cart still carries one letter.

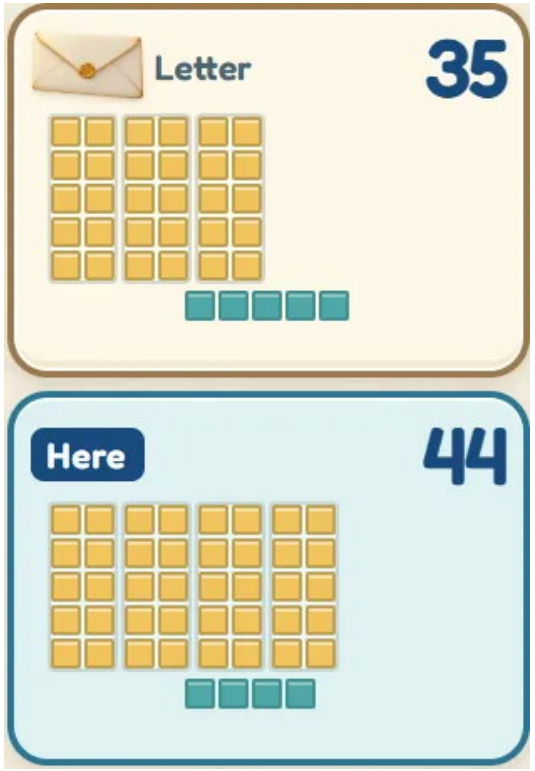


A row changes ten

One step up takes away one whole ten.

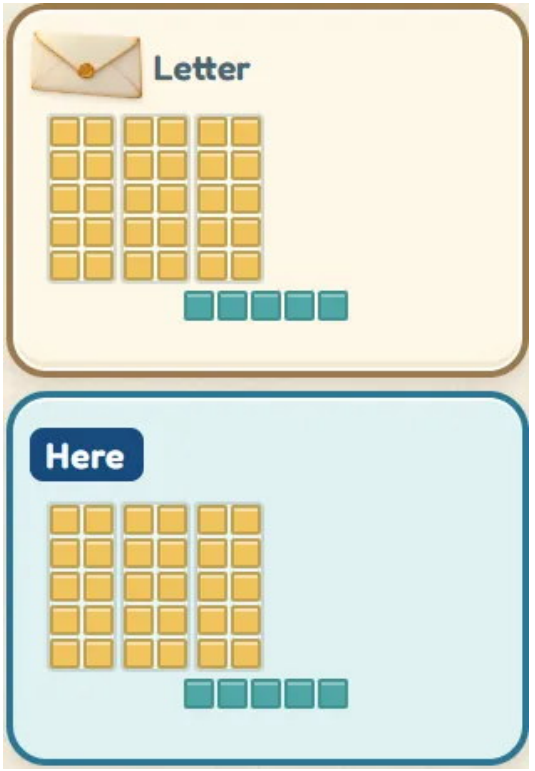
Three ones stay in place, so 53 becomes 43. Each rod shows exactly ten units.

Try again



Fix

After

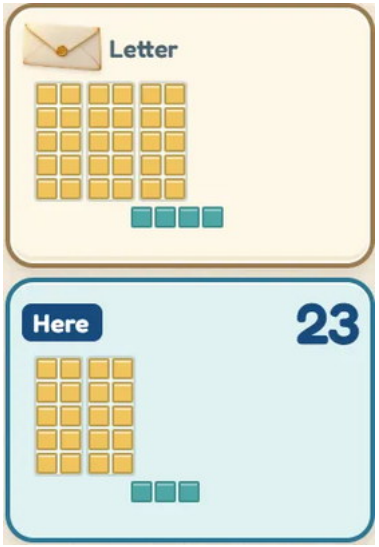


You can change your mind

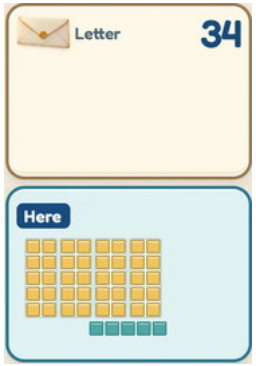
Not the same? Go back and try again.

After a wrong OK, Here and the letter stay visible. From 44, go to 34, then 35.

Your letter



Here



How to play

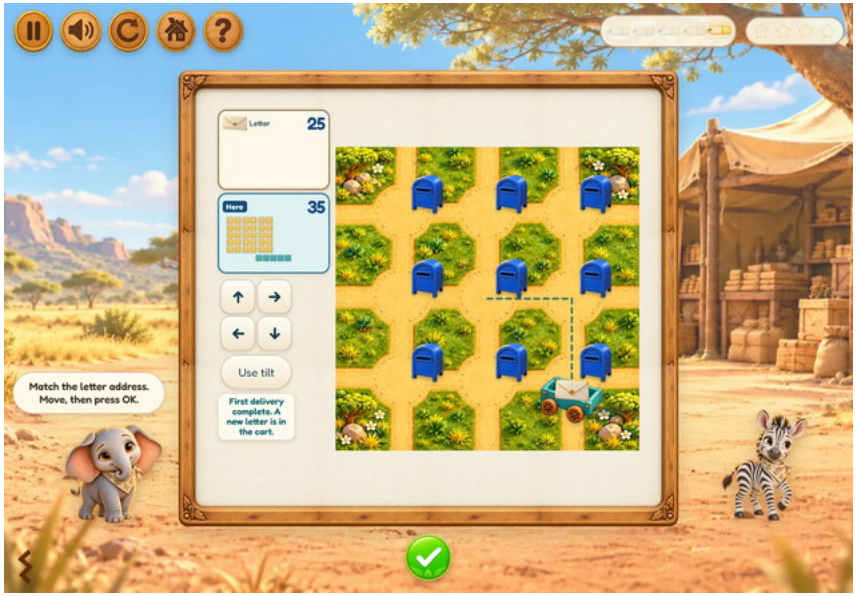
Read the address in a new way

The picture and the number can name the same address.

Level 2 shows the target model. Level 3 keeps the current model visible while the letter shows the number.

Before

The next letter



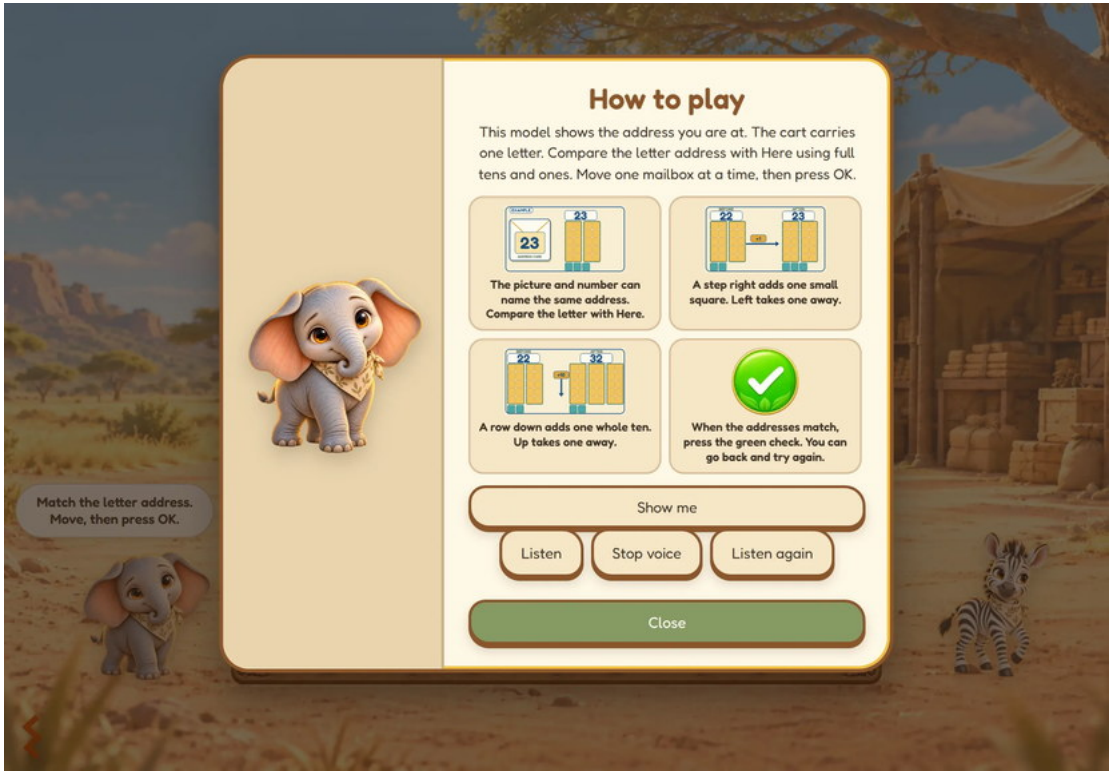
Well done

One new letter from here

Deliver. Read the next letter. Keep going from here.

The first 35 delivery is a checkpoint with no star. The next letter is 25; the cart stays at 35. Four L5 missions need eight deliveries.

How to play



Well done

Take your time

Move, compare, then press the green check.

Touch, arrows, and keyboard always work. Tilt is optional. The QR code opens wondermaths.app.
