Room for Every Maybe

POSSIBILITIES Two wooden fences show what could be true. Move them only when a clue gives you something new.

1 AT THE SORTING TABLE

At the sunny sorting table,
Giraffe draws near today.
A pocket keeps its secret;
two fences mark the way.

2 SEE THE QUANTITIES

Two rods rest on the table.
The pocket can hold two.
It might be empty, one, or full.
Which totals could be true?

3 COUNT AND COMPARE

With none inside, the total's two.
With two inside, it's four.
And three belongs between those ends:
not less, and nothing more.

4 ONE NEW CLUE

Now open up the pocket.
One wooden rod appears.
The rods have stayed the same throughout;
the hidden part is clear.

5 THE FENCES MEET

Slide both fences onto three.
They meet upon the line.
We changed the space for what we know,
and three fits there just fine.

Spread your hands for what could be;
bring them close when you can see.

ORI'S THOUGHT

When a clue tells us more, we can leave fewer possibilities open.

Ori says **Look. Include. Check.**
