Aro: Number Island

wondermaths.app

COUNT · CHOOSE · CHECK

Aro and the gecko are beside the Great River. Read aloud, point to the pods, and help the picture find its number.

1

BY THE RIVER

Beside the river, warm and bright,
a number waits in golden light.
Aro calls, “Come look with me—
our little island asks for three.”

2

ONE AND THREE

One pod on a card in view;
three on another—what to do?
Our gecko pauses by the shore.
Let's look, then count, to learn some more.

3

POINT AND COUNT

Point and count them, nice and slow.
Touch each pod before you go:
“One.” Then, “One, two, three.”
Which card matches? Come and see.

4

MOVE AND CHECK

Slide the whole card, steady, slow;
all three pods stay in a row.
Tap the green check. Look and see—
our card has three; the sign says three.

5

A MATCH!

The island's three, the card's three too;
we found the match—that's what to do.
Aro smiles; our gecko glows:
three is what that picture shows.

Point, count, choose—then check to see.
Three pods match the number three.

ORI'S NUMBER THOUGHT

A numeral names an amount. Count each pod once, then choose the picture with that many.

Try it together

Count the pods.
Choose the card.
Check the match.
