Rhino: Ten Steps Further

A little delivery. A helpful mistake.

wondermaths.app

Rhino tucked three loose sticks into a little pocket. Two tied bundles rode beside them. The pocket would keep the loose sticks safe.

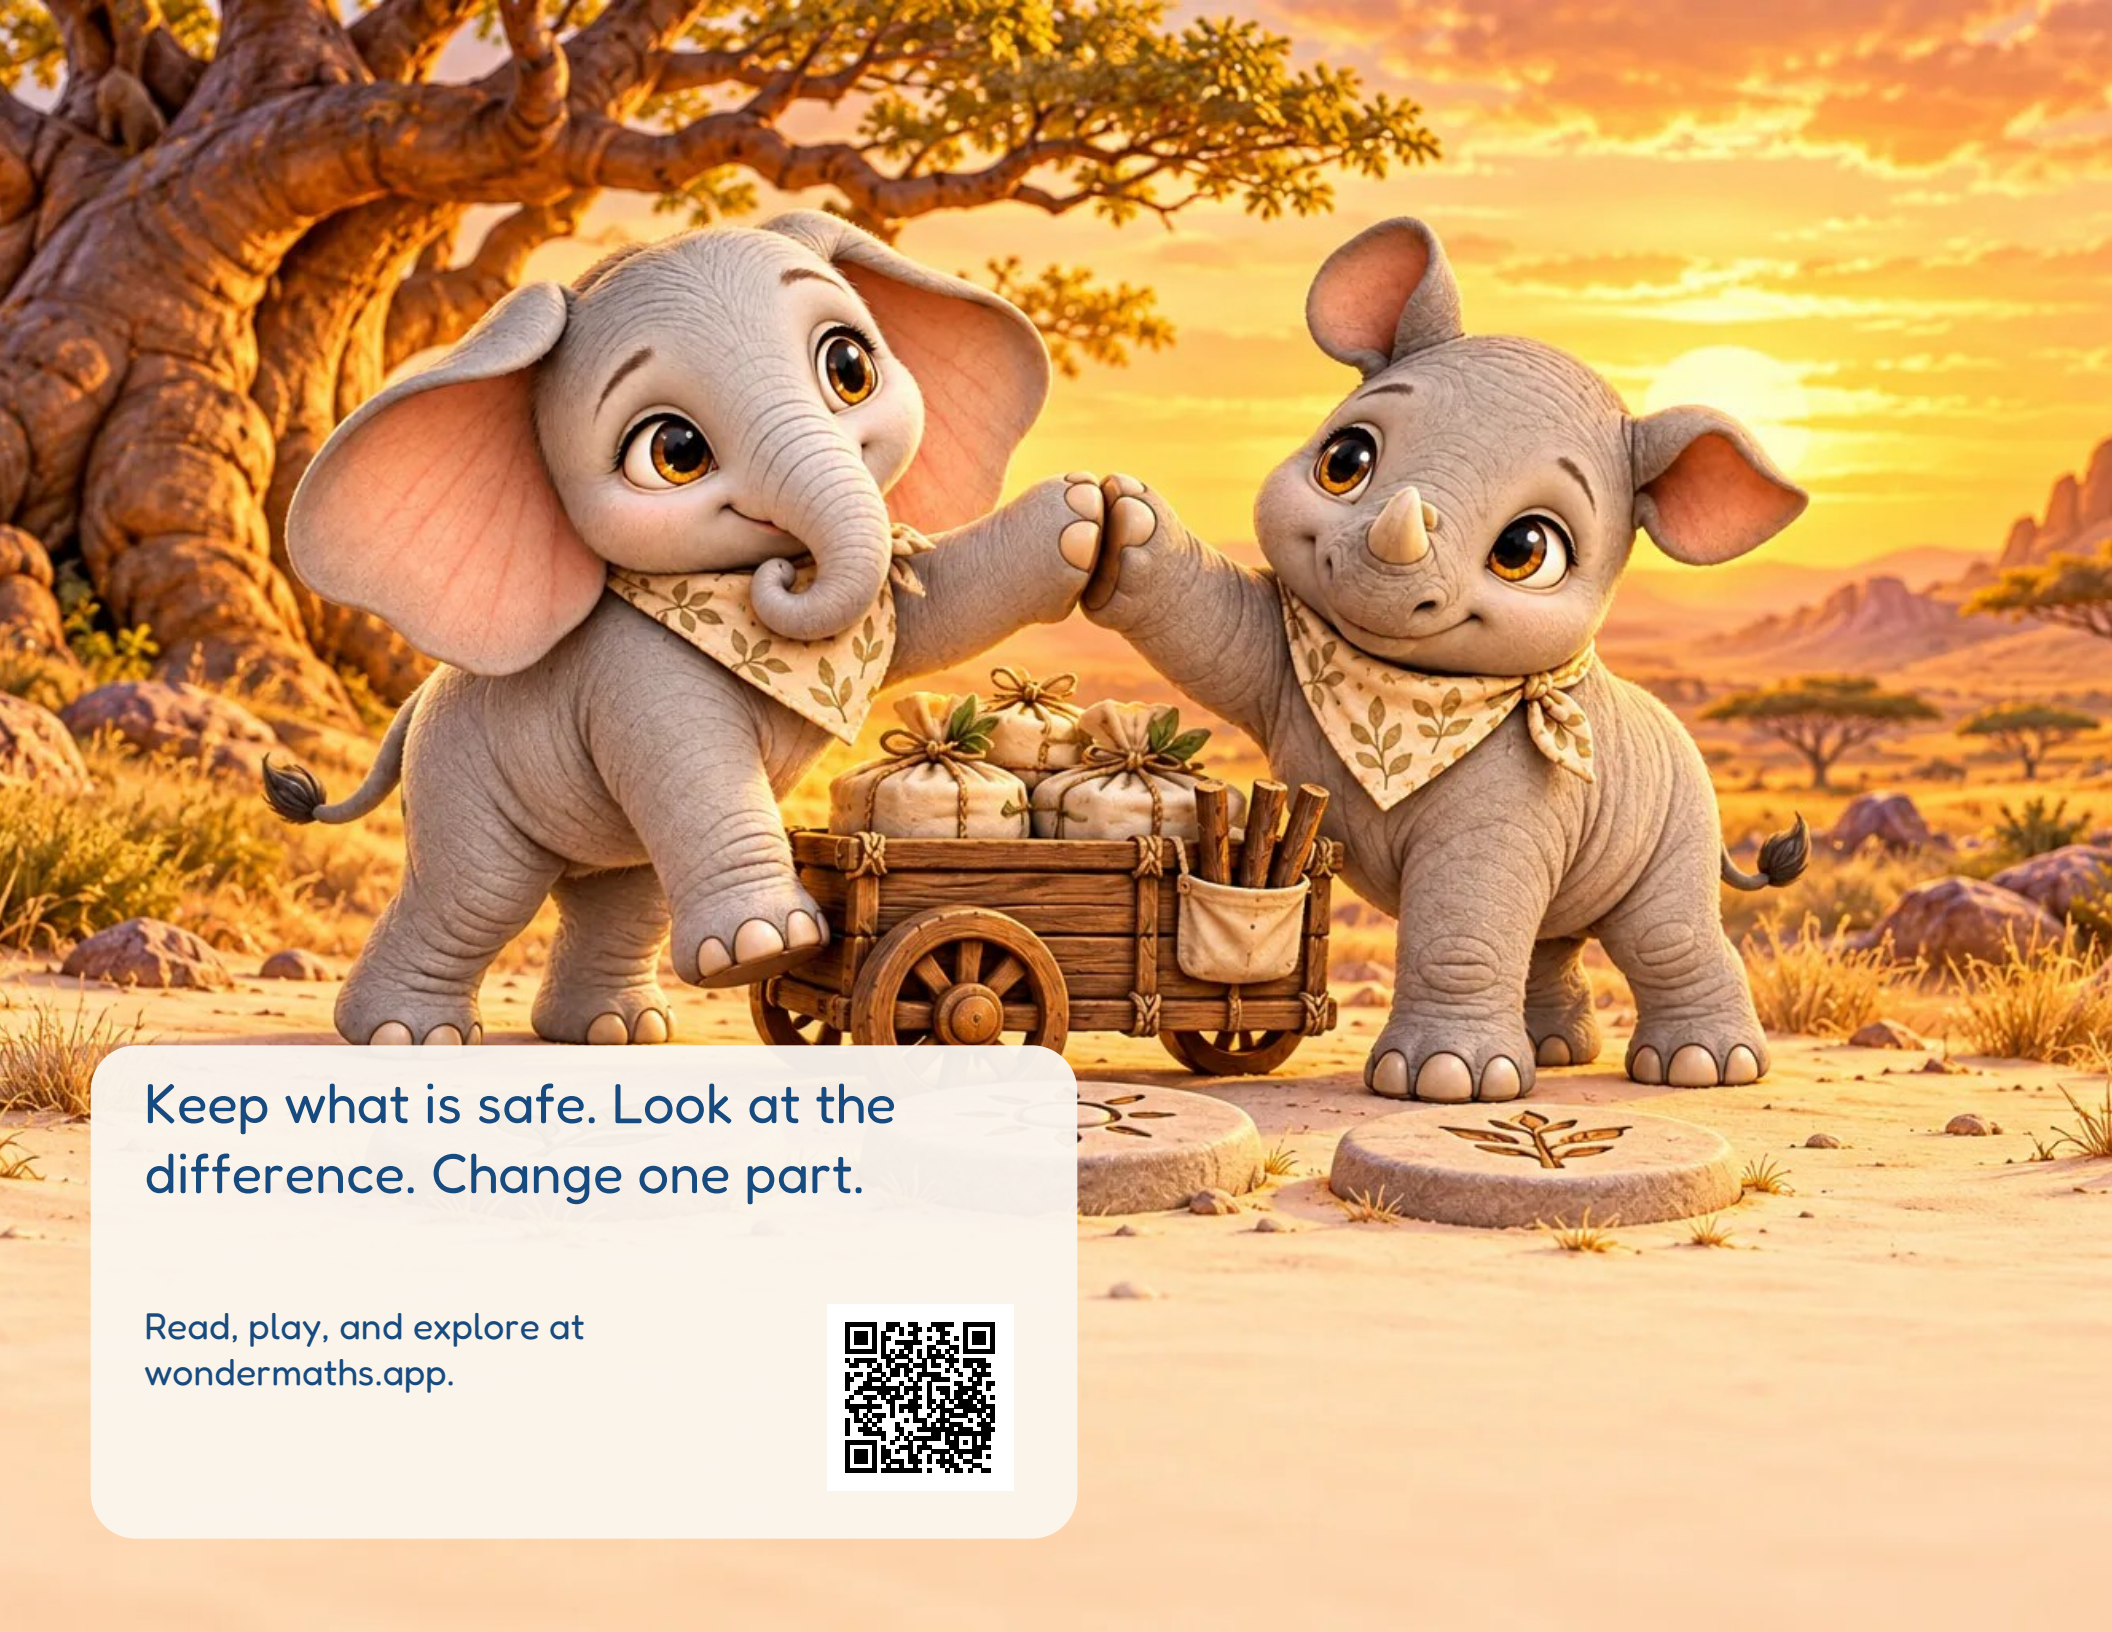
The delivery traveled in tens. Rhino wanted to make a route with a stopping place for each whole bundle.

Rhino put one stone too close. The step was short, but the bundle was whole. They did not fit. He left his idea where he could see it.

“I can move the stone,” said Rhino. He kept the pocket safe and made room for one whole ten.

One equal step. Then another. Rhino kept a stop between the start and the end. Every step had the same length.

The route was ready. Elephant and Rhino shared a gentle high five. “My first try helped me see what to change!” said Rhino.



Keep what is safe. Look at the difference. Change one part.
