

A quick guide for parents and caregivers

Capuchin: Finger Numbers

Ages 3-6

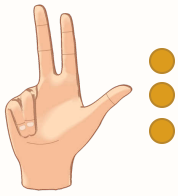

The goal: show a number from 0 to 10 on the pictured hands. | **Playful practice, not a test.**

5 ways to help without giving the answer

1. **Count up once.**
   Count each raised finger once, then stop.
2. **Give wait time.**
   Let your child look before you say anything.
3. **Tap one and watch.**
   Change a single finger and watch the count.
4. **Leave the wrong ones.**
   Keep the fingers and let your child adjust.
5. **Same amount, new fingers.**
   Ask for another way to show the number.

Your tiny play plan

5 minutes is plenty

- No timer
- Stars to celebrate
- Try again

Count along; let your child open the fingers.

5 signs the math is happening

1. **Counting only what is up**
   Your child skips folded fingers while counting.
2. **Watching the gold dots**
   They look from the dots back to the fingers.
3. **Moving one finger**
   One finger changes the count at a time.
4. **Using both hands**
   Bigger numbers need the second hand too.
5. **Fixing a mismatch**
   After a miss they adjust and try again.

Try it away from the screen today

Point to the pictured hands; real fingers can stay still.

Choose an amount. Show one to five on one hand. → **Count what is up.** Touch each raised finger once. → **Try new fingers.** Show the same amount another way.
