

Rhino: Put the Deliveries in Order

A picture guide

Ages 5–7 with an adult

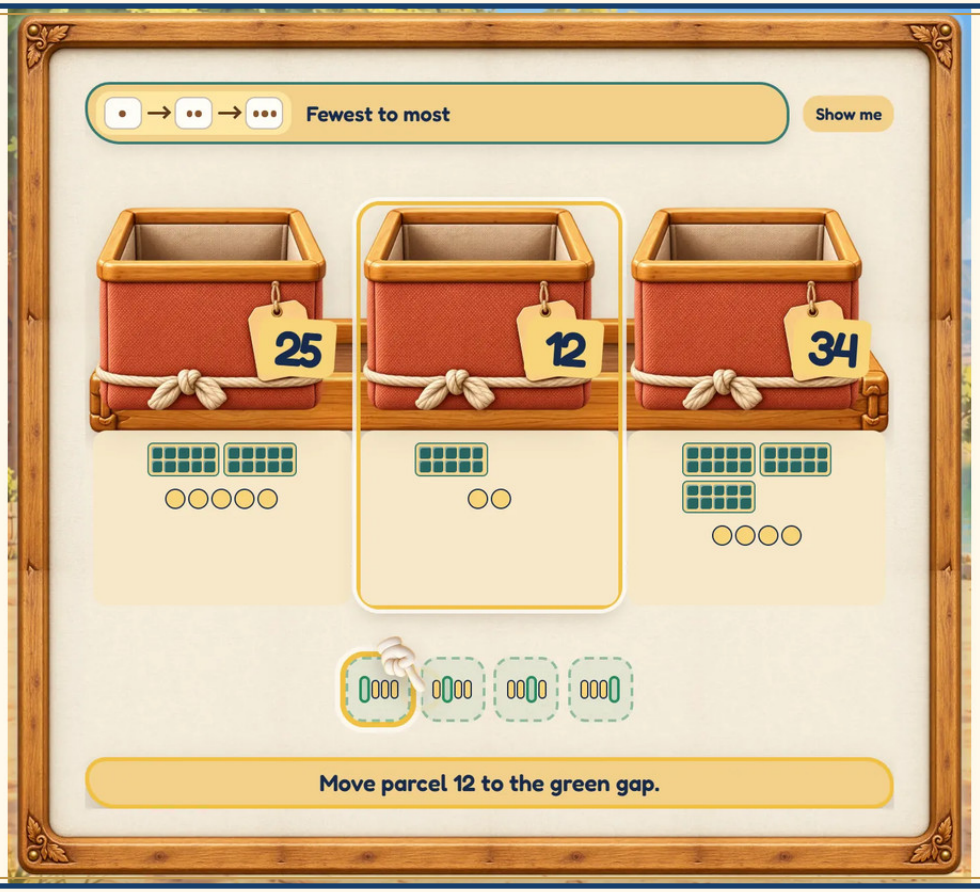

Look at the amounts. Move a whole parcel, then check the line.

Look at the amounts

In Level 1, the amounts are already visible. Four groups of ten make forty.
In later levels, tap Open to look inside a parcel.

Move one whole parcel

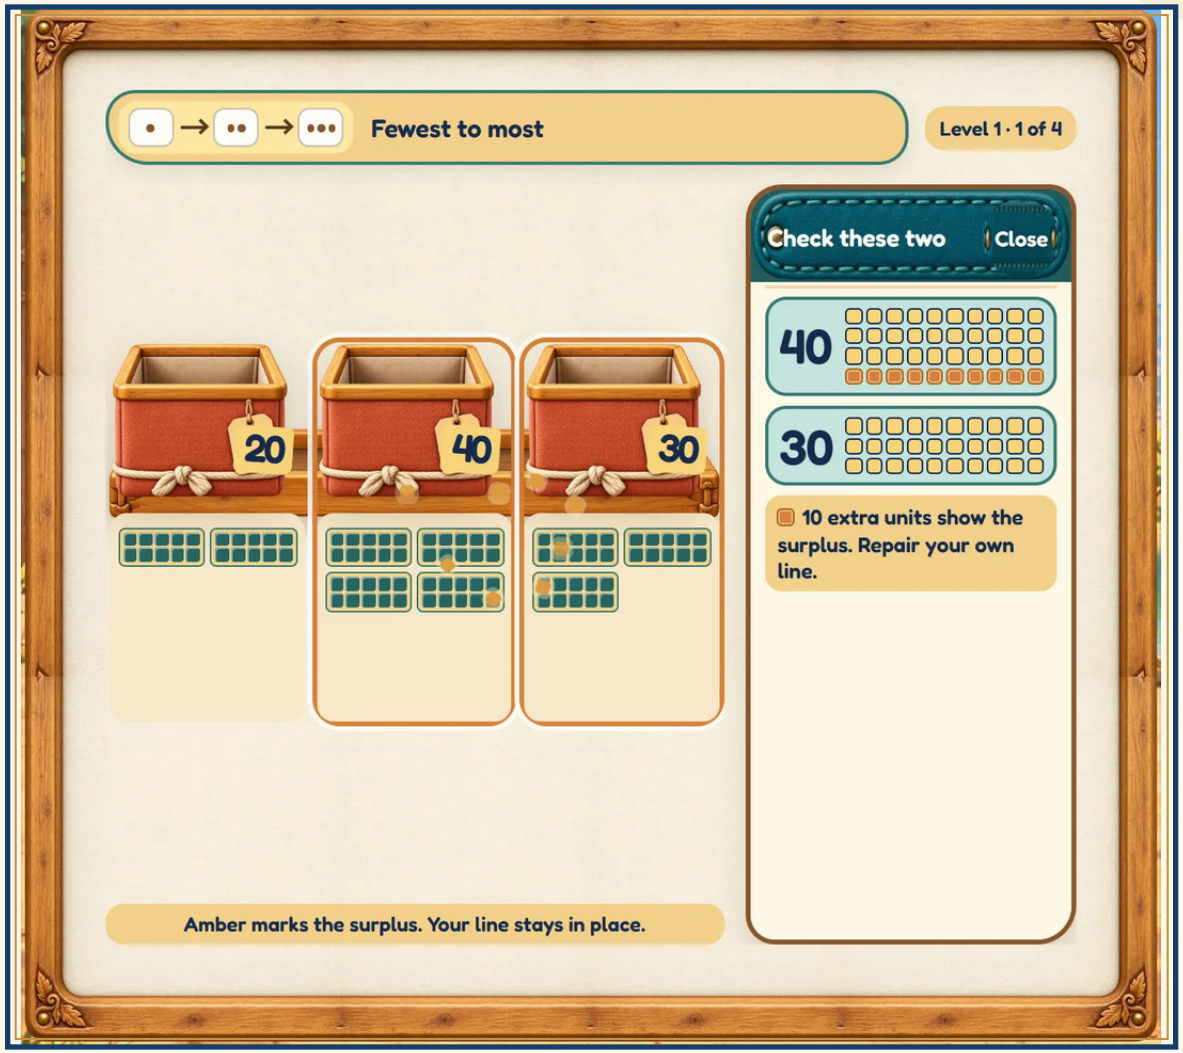

Choose a parcel. Tap the green place where it should go. You can also drag it. The neighbors change; the amount stays the same.

For the grown-up: Keyboard: Tab to a parcel, press Enter, then use the arrow keys.

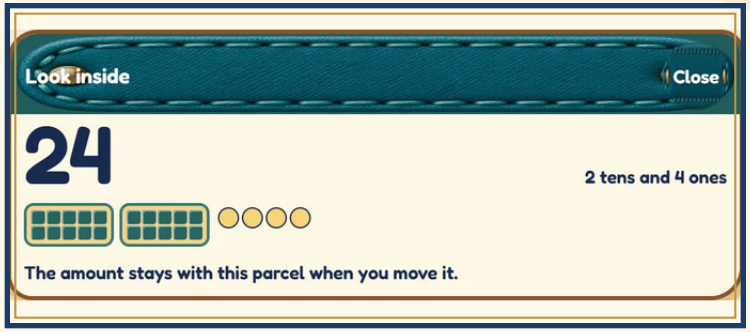

Check the line

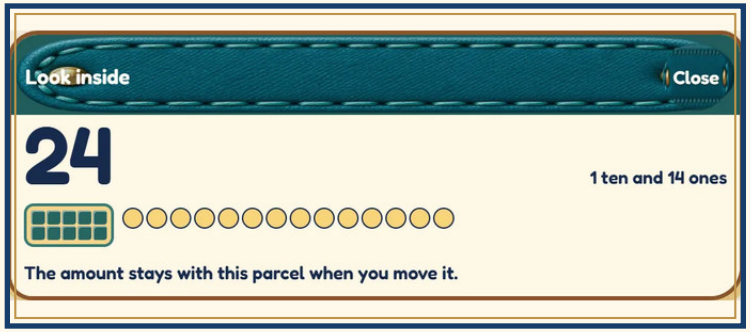

Press OK. If two neighbors do not fit, compare the highlighted pair. Your line stays put. Choose a small change, then check again.

A new direction

Sometimes the route starts with the most. Two equal amounts can sit either way. A line already in order can stay as it is.

Pause and try again

Pause keeps your line. Help shows the steps. Restart begins the level again. Four checked lines finish a level; five levels finish the adventure.

For the grown-up: Ask, “What do you notice?” Let your child choose the change.
