

A quick guide for parents and caregivers

Rhino: Put the Deliveries in Order

Guide: ages 5-7

The goal: Help Rhino arrange whole parcels by how many seeds they hold.

Playful practice, not a test.

5 ways to help without giving the answer

1. **Follow the direction picture.**
   Ask, “Which way is the line going?”
2. **Look at the contents.**
   In later levels, tap Open to look inside.
3. **Ask what your child notices.**
   A question gives thinking time.
4. **Use the two neighbors.**
   Compare what comes before and after.
5. **Wait for the next move.**
   Let your child choose which parcel moves.

Your tiny play plan

5

minutes

is plenty

No timer

You are a curious companion.

5 signs the math is happening

1. **Compares bundles first.**
   Full tens are checked before loose seeds.
2. **Looks at both neighbors.**
   The child checks the spaces on each side.
3. **Moves a whole parcel.**
   The contents stay with the parcel.
4. **Changes the plan.**
   A direction turn changes the route.
5. **Accepts equal parcels.**
   Equal totals may sit in either order.

Try it away from the screen today

Make bundles of ten.
Use large counters in three bowls.

→

Line up the bowls.
Order them from fewest to most.

→

Move one bowl.
Invite a small repair and explain it.

Use age-appropriate objects and supervise.
