Move Equal Fives

Build a bridge for Lino and the elephant. Every section stays five units long.

Watch Two Examples

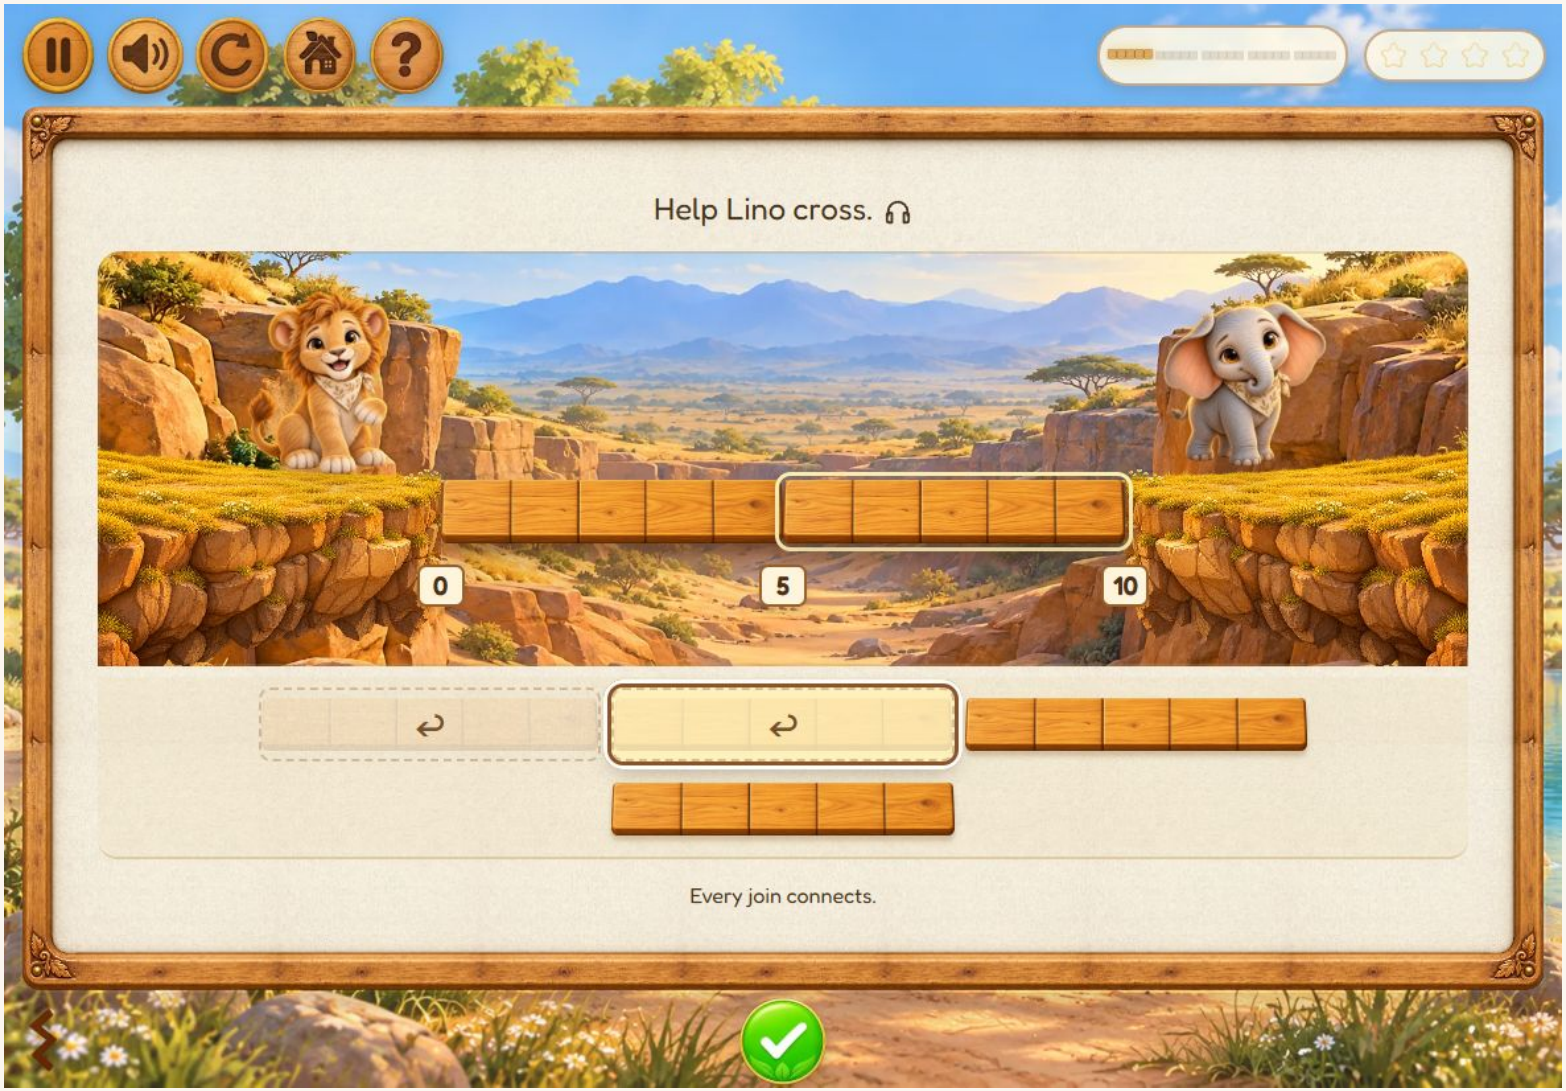

First, count equal fives as the bridge grows. Next, watch one extra section go back. Then build your own bridge.

Keep Every Five

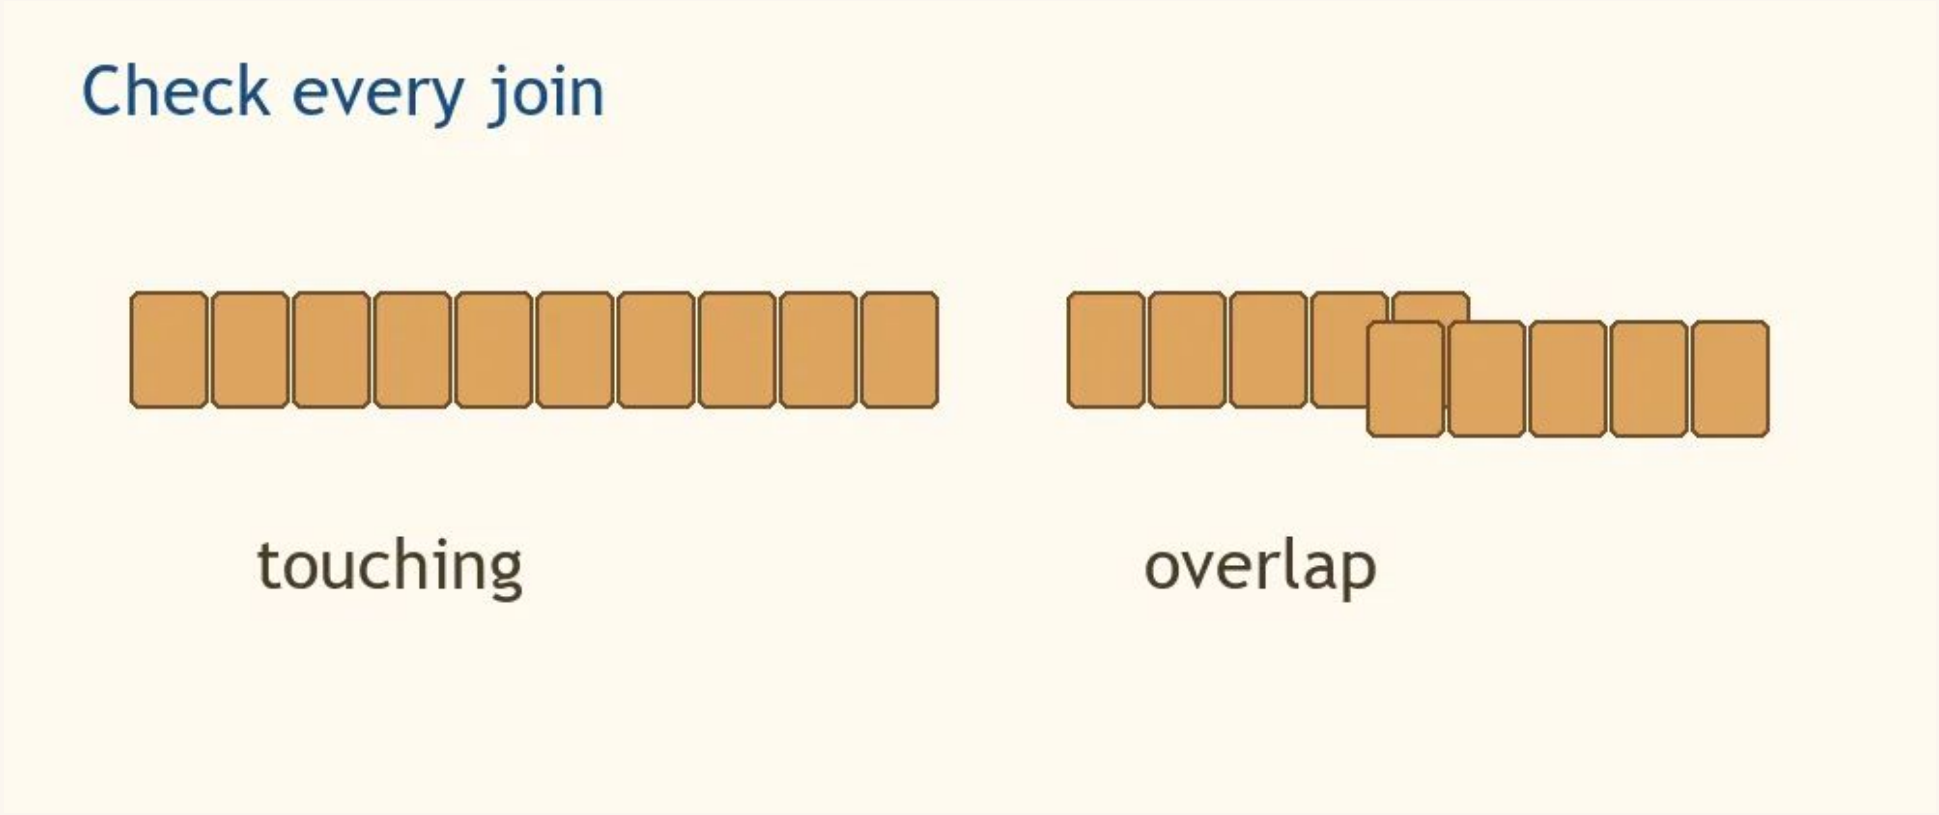

Each little board is one unit. Move the whole section. Do not stretch it.

Connect the Banks

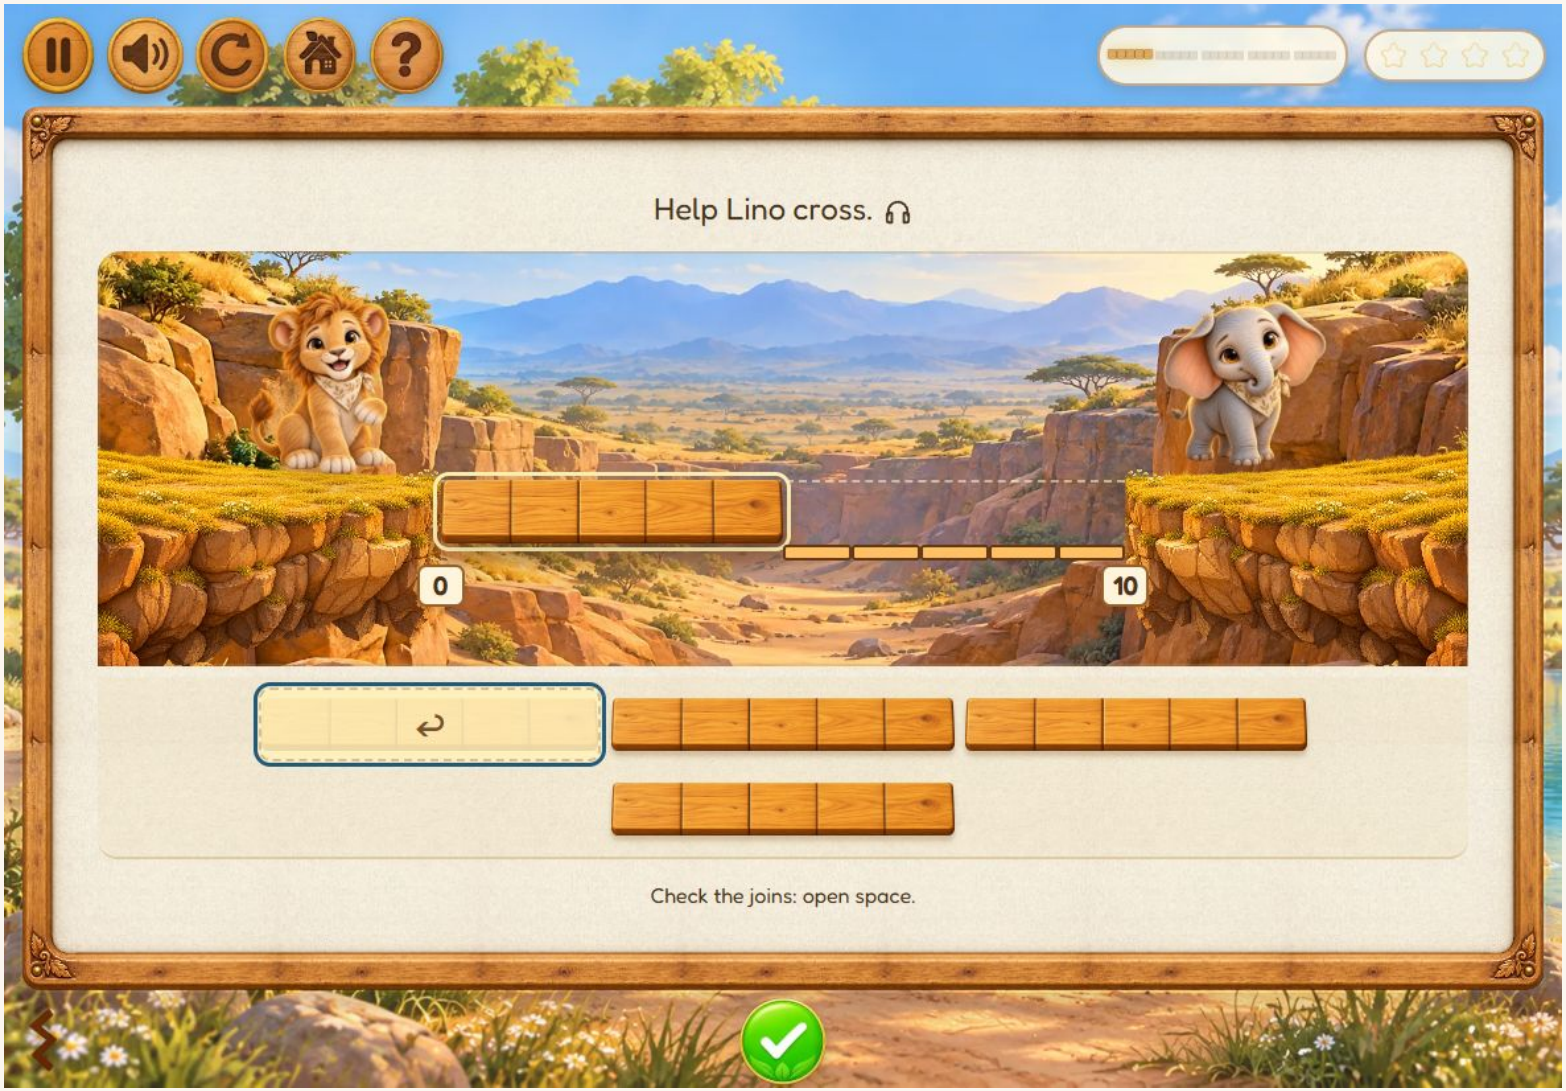

Look at both bank marks. The whole path must be covered exactly once.

Check Every Join

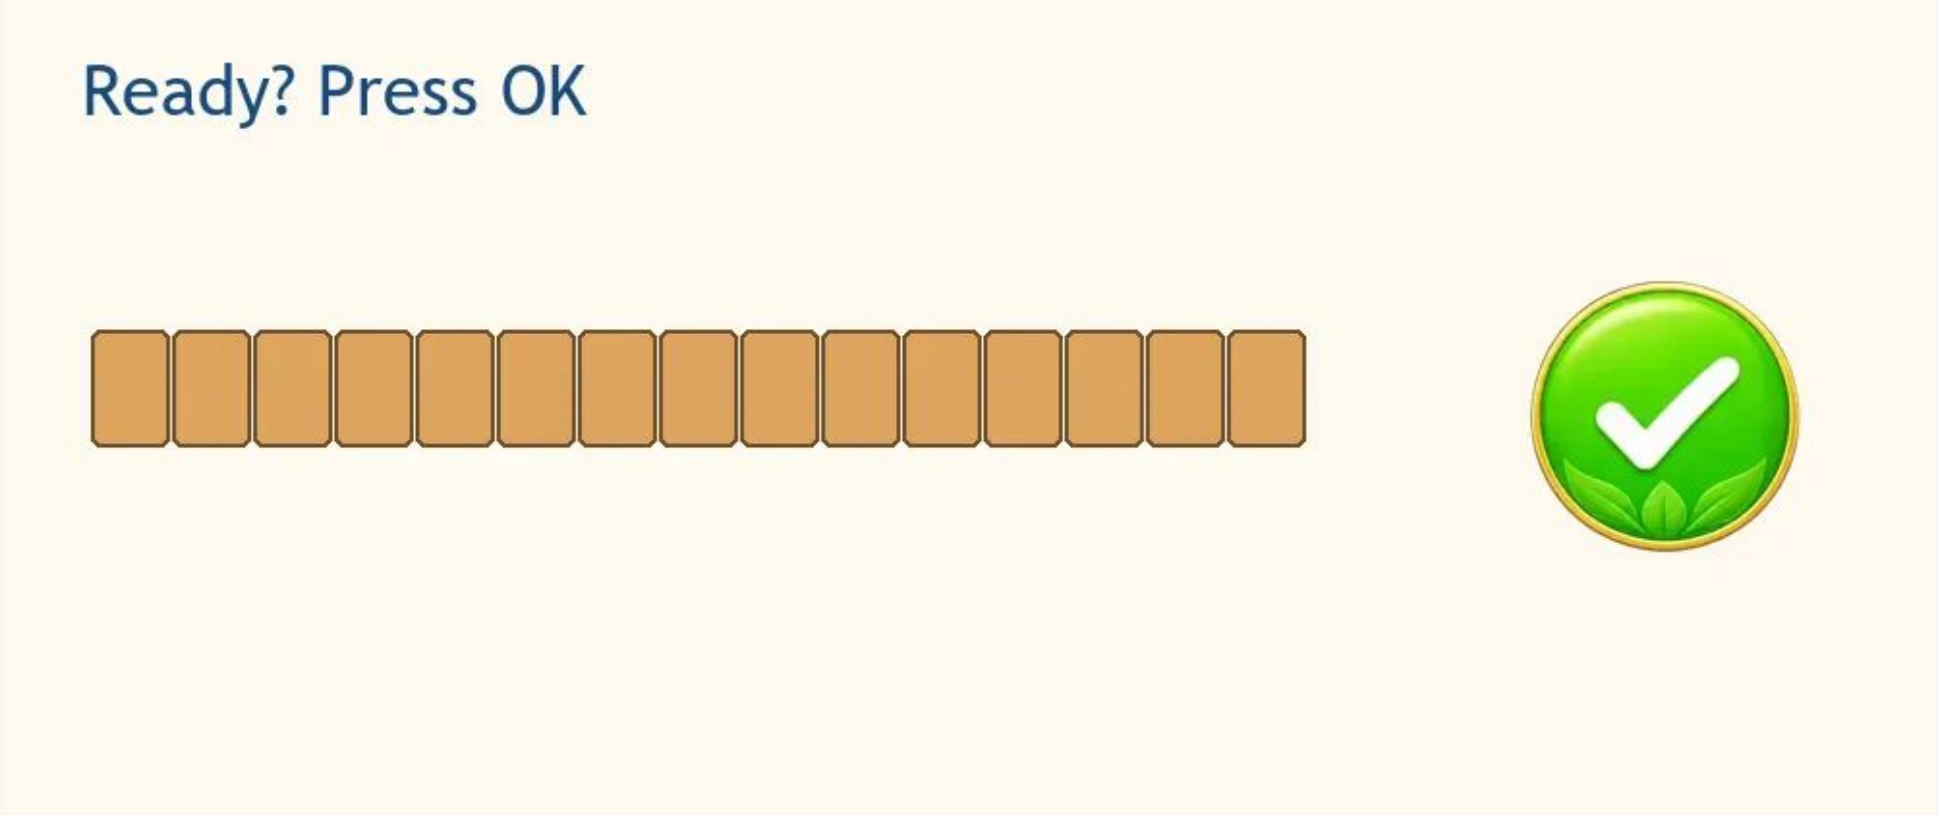

Touching ends continue the path. Gaps and overlapping wood need a repair.

Use Your Own Repair

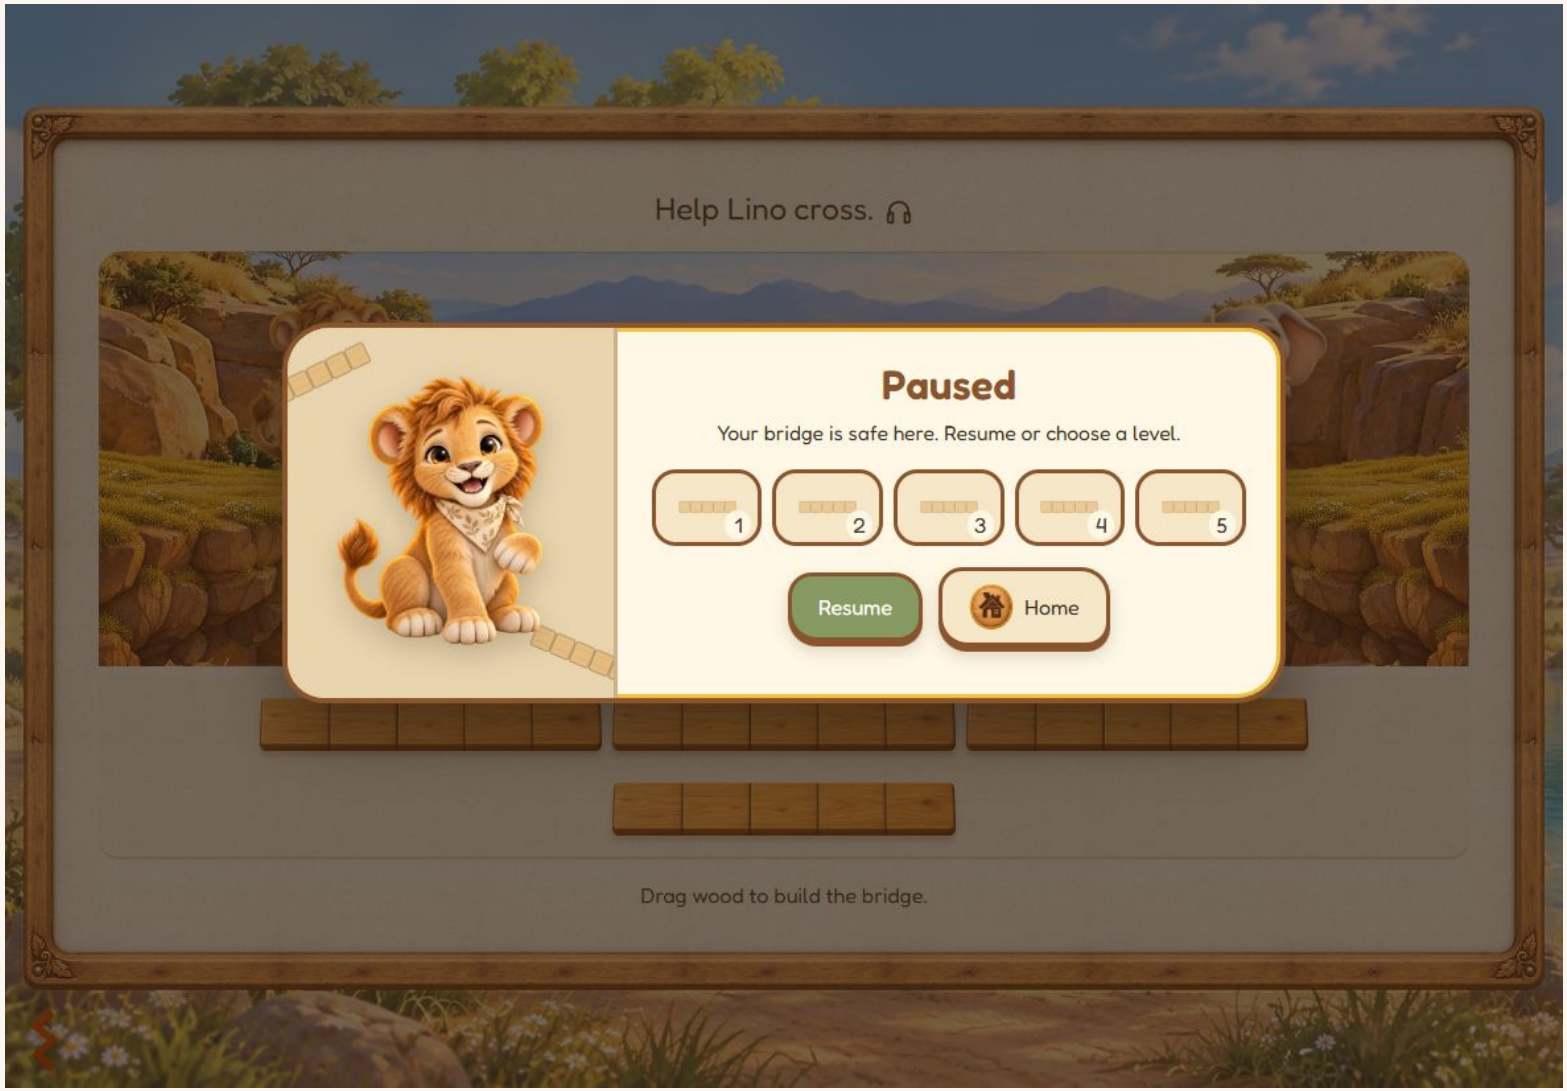

The amber marks show a relationship to check. Your work stays where you put it. Move or return a section.

Ready? Press OK

Only OK checks the bridge. A move alone earns no star.

Pause, Help, and Try Again

Pause keeps your bridge. Help shows the steps. Restart begins this level with four empty stars.
