Move deliveries in tens

Rhino and Elephant need a route for whole bundles. Keep the loose ones together.

Meet the delivery

The large numbers show the start and the destination. Every bundle contains ten sticks.

Add a stone

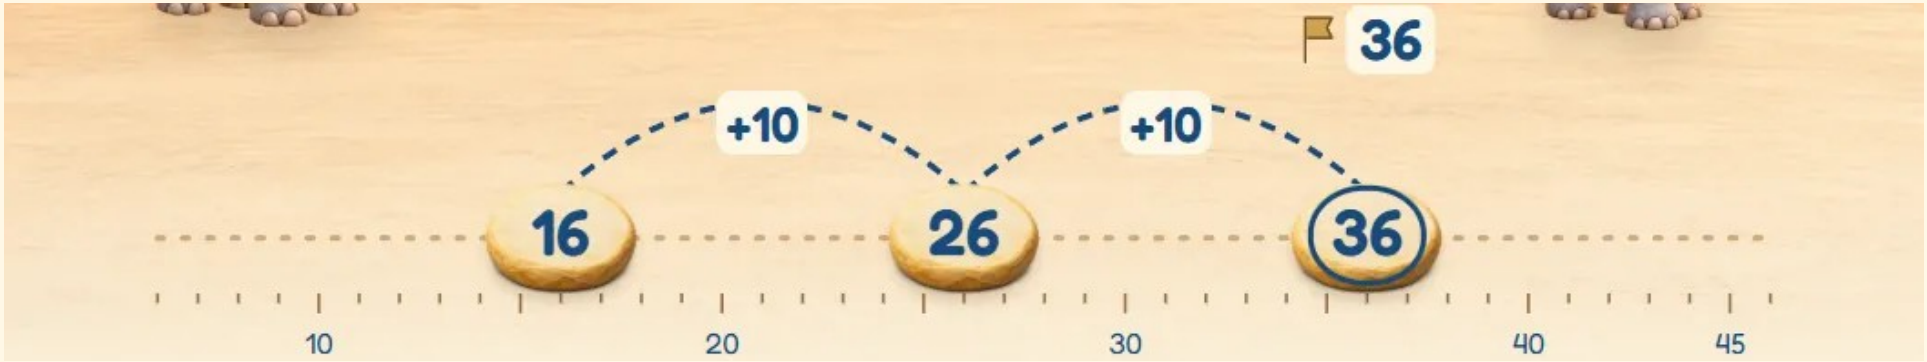

Drag a spare stone onto the path. Or tap the plus stone, then tap a place on the path.

Move the stop

Drag the stone itself to a number. Arrow keys move a selected stone one unit at a time. The green OK checks your whole path.

Check the whole route

Read the distance of every step. A route must reach the destination using steps of ten. Then press green OK.

Keep a helpful mistake

Compare each step with 10

Before: 1

After: 10

A step of nine or twenty is still visible. Move a stop or insert a missing one. Your first try stays for you to repair.

Take a break

Pause keeps your route. The question mark opens help and Show me replays a separate example. Restart clears this level.

A route to celebrate

Four completed deliveries earn a level celebration. All twenty deliveries open the finale.
